

The Proget engineering is a leading company in industrial automation that has been on the market for over thirty years.

It proposes itself as a system integrator for "key in hand (ready for use)" or partial equipment supplies.

In other words, we can supply "turnkey" systems to engineering companies, head-suppliers and manufacturers of machines and/or plant and end-users.

Our range of service and products goes from the transformation of medium voltage systems to low voltages ones up to the automation of factories and control systems for production processes.

We are currently working in a building of 2000 mq, including a 800 mq office area and a 1200 mq workshop and can also count on a separate factory area of 700 mq.

Our staff is composed, among others, of technicians with over twenty years of experience. Non-stop research and expansion into a variety of different production sectors has become our strong point and our own special characteristic.

The "field of action" of Proget engineering is practically unlimited.

The whole organization, as well as design and manufacture of both switchboards and systems, are ISO 9001 certified.
