

DEVELOPMENT

Proget engineering can count on the best hardware and software systems the market offers.

This sophisticated technology allows us to keep our initial projects under constant, rapid and safe control. Hardware and software engineering is complete and accurate thanks also to the possibility of gaining access to our computerised databank of orders, stored in optical disks.

Our company can offer:

- engineering of machines and plant and the graphic realisation of technical files and the relevant attachments
- complete hardware projects realised with CAD stations
- complete software projects for PLC, CNC and DCS
- Development of complete software for supervising, data acquiring and production process control carrying out

PRODUCTION

Twenty years of experience, innovative equipment, an excellent organisation, coordinated by a Production Manager and a Workshop Manager, and above all an effective quality control procedure, regarding each single stage of the production cycle, make our final product extremely reliable and of a higher quality than the average market product.

Proget engineering can manufacture power supply switchboards and automation control boards in compliance with the main standards in force (CEI, IEC, VDE, UL, CSA, NEMA), as well as electrical systems for machines and plant of any kind. Among the main users of our products: Fiat, Renault, Ford, Opel, Rolls Royce and more.
